Terror-Eyes

Prepare to Scare those Birds

Terror eyes is a 600mm diameter hanging ball that has menacing, moving eyes on front and back to strike fear into birds.

They work very well, especially when used in combination with sonic or ultra-sonic devices.

The lenticular eyes produce holographic effects, constantly moving back and forth as if they are following infesting birds.

Made of brilliantly colored heavy duty vinyl and scientifically designed from extensive experience and research on predator and bird behavior.

Found to be very effective when used in Orchards and Vineyards hung from a pole and weighted down with a heavy weight such as a cement brick, the Terror Eyes then bounce up and down on the spring provided and become a very frightening and moving apparition.

Take in at the end of each season, so the birds do not become used to this visual scarer.

Covers between 1 to 6 acres, depending on the topography of the site, and the surrounding environment.

Ideal for use in Vineyards, Orchards, Berry Farms, Airfields, hangars, Waste Stations, Tip sites, landfills, open lots, construction sites, marinas, roof tops, granaries, underpasses and back yards.

Government agencies such as NASA have solved their bird infestations with the Terror Eyes bird repeller.

USED AT NASA SPACE STATION USA ALONG WITH IRRI TAPE AND SBXP

Used in areas where there are many birds infesting or passing through in a season a frightening and effective visual deterrent.
